

Datamet Labelling Solutions

Tags and Labels for any Application, in any Environment

DATANET design and supply labelling solutions selected from a proven range of product materials for use across a broad range of industry segments.

We use a wide variety of premium materials and a bespoke manufacturing process to ensure output of a quality tag which will perform accordingly.

Manufacture

Labels are manufactured to your specifications taking into account shape, size, colour and performance requirements.

Choices are customised appropriately, such as, the type of paper or synthetic material (thermal transfer or direct thermal) and the output required (rolls, packs or sheets).

Supply

- 1) **Pre-printed** labels and tags can be produced utilising our in-house design team.
- 2) **Blank Supply and Overprint.** Those with a requirement to produce labels and tags on the fly will be provided with technologies and consumables to ensure specifications are perfect for the intended application.
- 3) **RFID Tags.** Smart technologies are utilised to produce RFID tags which are certified and guaranteed to perform in any conditions.

Application

Our labels reliably adhere to a variety of industrial surfaces such as steel, glass, wood, aluminium and petroleum based materials. They are designed to perform in submerged, frozen and high heat intensity environments.

Customers

Our customers belong to industries that rely on accurate identification. Examples include transport and logistics, resources, warehousing, retail, food and beverage, manufacturing, hire, laboratories and healthcare.

Just another way that Datamet creates enhanced transaction speed and accuracy.
